Richmond (Kofi) Azadze

(512) 650-9818 | richmondazadze1313@gmail.com | richmondazadze.com | linkedin.com/in/richmond-azadze | github.com/richmondazadze

EDUCATION

Grambling State University *Grambling, LA*
Bachelor of Science in Computer Science | GPA: 3.94 *May 2028*
Relevant Courses: Data Structures & Algorithms, Operating Systems, Database Systems, Artificial Intelligence

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, C++, SQL, HTML/CSS
Frameworks, Tools & Platforms: React, Next.js, Node.js, Tailwind CSS, Git, GitHub Actions, Docker, AWS, Vercel, PostgreSQL, Supabase, Firebase, REST APIs, Clerk, Stripe, Solana, OpenAI API, Gemini API, ElevenLabs

EXPERIENCE

Founder & CEO — Scan2Tap | *Remote* May 2025 – Present
– Grew an NFC/QR digital networking platform to **180+ created profiles** and **100+ active users** by architecting it end-to-end on Next.js, TypeScript, and Supabase for campus and founder communities
– Converted early adopters into **3 paying customers** and fulfilled **10+ physical orders** by building an end-to-end pipeline linking account creation, payments, and NFC card delivery, from signup to a card in hand
– Delivered real-time contact exchange for students, founders, and professionals by engineering mobile-first onboarding, custom profile pages, and one-tap sharing workflows for events and conferences

IT Intern — FGFF Rapha Center | *Elyria, OH* Jun 2026 – Jul 2026
– Kept classroom and office technology running for **hundreds of staff and students** by troubleshooting devices, managing user access, and resolving issues across **20+ devices** at the academy center
– Improved network reliability and system performance by resolving connectivity issues and configuring software across **3 platforms** — Microsoft 365, Google Workspace, and Windows systems

Software Engineering Fellow — Headstarter AI | *Remote* Jul 2024 – Sep 2024
– Shipped **5 AI-powered web applications** in 3-week Agile sprints by building with Next.js, Firebase, and the Gemini and OpenAI APIs, including authentication, API-driven workflows, and responsive interfaces
– Improved application performance by **35%** and reduced user drop-off by **20%** by optimizing asynchronous data fetching, component-level caching, and API request handling across the fellowship applications

PROJECTS

Bountini — *Next.js, TypeScript, Solana, Neon Postgres* Oct 2026 | bountini.us | GitHub
– Won **[MLH] Best Use of Solana** at CodeRED: Orion by building a Solana Devnet bounty marketplace — "Small quests. Real rewards." — connecting posted quests to on-chain rewards for completed work
– Built the full quest-and-reward flow — posting quests, tracking submissions, and settling rewards on-chain — with Next.js and TypeScript, separating on-chain settlement from fast app data in Neon Postgres
– Deployed the marketplace live on Vercel within one hackathon weekend, with Solana Devnet handling reward settlement and wallet connection end-to-end for posters and hunters alike

COHUE — *Next.js 16, TypeScript, PostgreSQL, Gemini, ElevenLabs* Oct 2026 | cohue.tech | GitHub
– Turned typed or spoken goals into committed teams at HackTX 2026 by building a consent-based matching engine with invitations in English, Spanish, and French — no one is added without a real personal "yes"
– Orchestrated **3 AI systems** — Gemini for drafting and translation, Meta Muse Spark for strategy checks, and ElevenLabs for voice — behind a background discovery worker running on a Vultr VM
– Validated the full loop on a 200-person synthetic showcase — every demo profile clearly labeled — with a private-beta waitlist already collecting real users ahead of public launch, none of them synthetic

ApplyGrid — *Next.js, TypeScript, Supabase* Aug 2026 | Demo | GitHub
– Eliminated manual application tracking by building a production workspace that parses a pasted posting URL into a structured record and tracks it from wishlist to offer, replacing spreadsheets and scattered bookmarks
– Integrated **4 ATS platforms** (Greenhouse, Lever, Ashby, Workday) through their public APIs with JSON-LD fallback, and isolated per-user data with Supabase row-level security and authenticated sessions
– Shipped and verified the system end-to-end in production — real accounts, real postings, real deadlines — giving each user a private, persistent workspace for their entire internship search

LEADERSHIP & ACTIVITIES

TEDx Speaker — TEDxGramblingStateUniversity Oct 2026
– Selected to deliver an original talk to a live audience of ~100 people — "Opportunity isn't found. It's built by those who walk in."

AUC x Mastercard Data Challenge — 3rd Place | *Atlanta University Center Consortium* Apr 2026
– Placed **3rd of 106 teams**; led Python data analysis and co-built Access Terrain Network
